

Historical and Implied Volatility Calculator

Powered by IVolatility

The Volatility Charts Tool, allows users to explore detailed analytics on any selected symbol, including a price and volume chart, and a comparison of 30-day implied volatility (IV30) to 20-day historical volatility (HV20) for the past year. It also includes an analytical table with parameters such as volatilities and correlation to the S&P 500®, enabling quick assessments of trends, volatility, and potential movements in the asset

Price and Volume Chart

DATA PRESENTED: A daily price chart for the past year with trading volumes.

DETAILS: Each data point represents a single trading day, and volume reflects the total number of shares traded.

PURPOSE: Quickly visualize price trends and volume dynamics, identifying any peaks or dips that might influence trading decisions.

Implied and Historical Volatility Chart

IMPLIED VOLATILITY (IV30): Reflects market expectations for future volatility based on options premiums.

HISTORICAL VOLATILITY (HV20): Measures past price fluctuations over a 20-day period.

ANALYSIS: This comparison of implied and historical volatility can directly impact options pricing. Implied volatility is typically used to gauge potential price swings in the future, while historical volatility measures past movements.

Note: Both volatility measures are annualized for standardized comparison.

Analytical Data Table

The table provides key insights, such as:

HISTORICAL VOLATILITY (HV): Actual volatility experienced by the asset over specific periods.

IMPLIED VOLATILITY (IV): Market-derived estimate of future volatility, based on recent options trades.

IV INDEX CALL: Vega-weighted average implied volatility, using call options.

IV INDEX PUT: Vega-weighted average implied volatility, using put options.

IV INDEX MEAN: Average of the IV Index Call and IV Index Put, giving a balanced view of volatility.

30-DAY HISTORICAL CORRELATION TO S&P 500: Shows the correlation over a 30-day period, balancing responsiveness to market changes and stability.

Timeframes: Data is presented for the current day, past week, and over a year, with each metric
